Concrete Cutting & Coring Services

What We Do. **cutting & coring services**

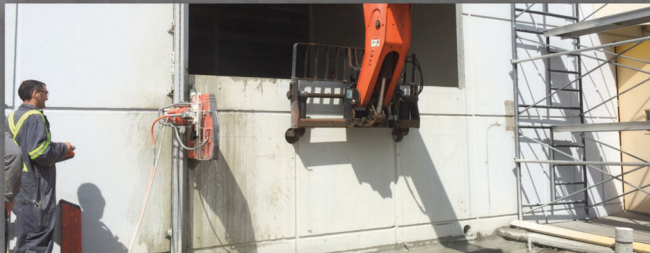

CORE DRILLING. Diamond Core Drilling techniques are used when a precise circular penetration is needed. Coring can be done in slabs and walls on any angle.

SLAB SAWING is the most commonly used diamond method. It is typically used to cut horizontal flat surfaces such as floors, bridge decks, and pavement.

WALL SAWING employs a circular blade on a track-mounted machine. The track is attached to vertical walls, steep inclines, or floors that will not permit the use of slab saws.

HAND SAWING techniques are generally used for smaller jobs where it is faster and more cost effective.

DEMOLITION & REMOVAL. We provide partial demolition services to prepare structures for reconstruction.

Safety **first**

Tri-City Cutting & Coring Ltd. is

committed to providing and maintaining a safe and healthy work environment for all its employees through the use of a comprehensive **Occupational Health & Safety Program** that is easy to use and understand. A program that exceeds WorkSafeBC regulations.

Our employee retention is made possible by our commitment to **safety, reliable equipment, professionalism,** and the belief in what we do.
